Education

Vellore Institute of Technology

2023 - 2027

B.Tech in Computer Science (Specialization in Cyber Security and Digital Forensics)

GPA: 8.30

Technical Skills

Languages: Java, Python

Frameworks & Web: Spring Boot, React.js, Tailwind CSS, REST APIs, JavaScript

Tools & Databases: MySQL, SQL, OpenCV, Git, JWT, C++

Internships

MPOnline Limited

May 2026 – Aug 2026

Advanced Software Engineering & AI Trainee

- Completed intensive training in scalable software engineering and Software Development Life Cycle (SDLC) methodologies to understand enterprise-level architecture.
- Built practical computer vision applications by applying foundational AI/ML techniques and incorporating secure software design practices.

B School Buzz

Nov 2025 – Jan 2026

Project Management Intern (On-Site)

- Managed cross-functional workflows across 5 distinct teams using Agile sprint-tracking, which improved on-time delivery by 20% and decreased project delays by 15%.
- Standardized planning tools and facilitated daily stand-up meetings to maintain continuous stakeholder alignment, driving a 20% faster task turnaround rate.

Projects

Attendly - Anti-Proxy Attendance System | Java, Spring Boot, React.js, Tailwind CSS, MySQL, JWT

- Built a full-stack attendance verification platform utilizing OTP-style dynamic QR tokens and live geofencing to eliminate fraudulent check-ins.
- Secured the backend with Spring Security and JWT-based Role-Based Access Control (RBAC), establishing distinct roles for students, faculty, and admins.
- Delivered a mobile-responsive React.js interface, successfully reducing proxy check-ins by 90% and achieving zero unauthorized access incidents during a 500+ student pilot.
- Project Link:** tinyurl.com/ycy8z5t9

Intrusion Detection System (AI Crowd Monitoring) | Python, OpenCV, NumPy, Computer Vision

- Engineered an AI-powered real-time video processing pipeline in OpenCV to monitor crowd density and detect movement anomalies across live camera feeds.
- Calibrated detection thresholds and integrated background noise filtering to accurately distinguish genuine intrusions from routine environmental and lighting changes.
- Optimized frame-sampling throughput to sustain real-time alerting without dropping frames, improving detection accuracy by 18% and reducing false-positive alerts by 20%.
- Project Link:** tinyurl.com/4f6r47m7

Certifications

- Google IT Support Professional Certificate** – Google
- Industrial IoT Markets and Security** – University of Colorado Boulder
- AWS Fundamentals Certificate** – Amazon Web Services (AWS)
